

MAINTENANCE GUIDE – FINISHES CARE AND MAINTENANCE

To maintain the finish quality of our Tivoli System, please follow the cleaning procedures provided below. With regular care and maintenance, the C&R furniture will provide years of superior performance and satisfaction.

The instruction for the care and maintenance are provided to you as a service. No warranty is implied since results vary

Powdercoated Metal

For normal cleaning, wash coated metal surfaces with a soft cloth soaked in detergent and warm water; rinse thoroughly and dry.

Remove scuff marks from low-gloss coatings with pre-softened paste wax, following the manufacturer's instructions.

For assistance in determining the appropriate colour and gloss for touch up paint, please contact C&R personnel.

Poly-carbonate / Acrylic Panels

For normal cleaning, first rinse the surface with clean water to remove any particles of dust or other abrasive materials. Sponge the plastic gently with warm water and a mild, nonabrasive soap or a solution of ammonia and water. Rinse thoroughly with clean water and dry with a soft cloth. After cleaning, the polycarbonate can be polished with a good wax polish applied with a clean, soft flannel pad.

Do not use benzene, acetone, denatured alcohol, or gasoline. These solvents soften the surface of the plastic and may cause damage. Also avoid using glass cleaning compounds, abrasive cleaners, and hard instruments. Make sure cleaning materials are free of grit and other foreign materials.

Glass

For normal cleaning, use products specifically designed for glass

Plastic

For normal cleaning, wash plastic surfaces with a soft cloth soaked in mild detergent and warm water. Rinse thoroughly and drop with a soft cloth. Do not use solvents or abrasive kitchen cleaners.

Melamine / Laminates

Products using melamine and laminate include tabletops, work surfaces, counter tops, overhead cabinets, filing cabinets.

For normal cleaning, wash melamine and laminate with a soft cloth and a solution of mild detergent and warm water. Rinse thoroughly and dry with a soft cloth.

For minor report of burns or other stubborn marks, apply a nonabrasive liquid kitchen cleanser with a soft cloth soaked in warm water. Rub in the director of the grain; use caution to avoid damaging the surface texture or gloss. If no grain direction is visible, rub with a light, in circular motion.

Do not use powdered abrasives or other harsh cleansers like hypochlorite bleach, hydrogen peroxide, nitric or hydrochloric acids, or lye, they may deface the surface and change the finish colour.

Polished Aluminium

For normal cleaning, apply a pre-soften paste wax to polished aluminium components following the manufacturer's instructions. In humid atmospheres near salt water, apply the wax once a month. In other areas, apply wax evenly three months to maintain the appearance of the aluminium.
